

Did you
know?

Fun Flower Facts

Sunflowers move throughout the day in response to the movement of the sun from east to west.

Did you know broccoli is technically a flower? The green florets on the stalk are actually immature flowers, and if left to grow, they open into tiny yellow flowers.

Sunflowers produce substances that are toxic to other plants. Other plants growing around them may slowly die.

Around 2000 different types of plants can be used by humans to make food.

Flowers did not always exist; they first appeared 140 million years ago.

There are over 400,000 types of flowering plants in the world. But as many are yet to be discovered, the true number may be even higher!
